Patient survey report 2008

Emergency department survey 2008: London trusts
The Whittington Hospital NHS Trust

The national Emergency department survey 2008 was designed, developed and co-ordinated by the Acute Surveys Co-ordination Centre for the NHS Patient Survey Programme at Picker Institute Europe.

making patients' views count

National NHS patient survey programme

Emergency department survey 2008: London trusts

The Healthcare Commission

The Healthcare Commission is the independent watchdog for healthcare in England. We have a statutory duty to assess and report on the quality and safety of services provided by the NHS and the independent sector, in order to promote continuous improvement in healthcare for the benefit of patients and the public.

Emergency department survey 2008: London trusts

To improve the quality of services that the NHS delivers, it is important to understand what patients think about their care and treatment. One way of doing this is by asking patients who have recently used their local health services to tell us about their experiences.

This report provides the results of the third survey of emergency departments for non-specialist trusts in London. It shows how each trust scored for each question in the survey, in comparison with other London trusts. It should be used to understand the trust's performance, and to identify areas for improvement.

Analysis of some previous patient surveys has suggested that patterns of responses differ between London trusts, and trusts outside of London. Results for London trusts are therefore presented separately from other regions, so that London trusts are treated as a different group. The Healthcare Commission will explore this issue further.

A further set of tables shows the national (England) results¹ for the 2008 survey (available on our website) compared with the results for the previous surveys where possible. These documents were produced by the Acute Surveys Coordination Centre at the Picker Institute.

Similar surveys of emergency departments were carried out in 2003 and 2004. They are part of a wider programme of NHS patient surveys, which covers a range of topics including hospital inpatient services, community mental health, health services for children and young people, and ambulance and primary care services. To find out more about our programme, please visit our website (see further information section).

About the survey

The third emergency department survey involved 151 acute NHS trusts. We received responses from almost 50,000 patients, a response rate of 40%. Patients were eligible for the survey if they were aged 16 years or older and had attended the emergency department in January, February or March 2008.

The survey was carried out by 26 non-specialist trusts within the London Strategic Health Authority (SHA) area. This report compares the performance of this trust with all other trusts within the London SHA area.

¹The results for England are displayed in the tables as percentage of respondents for England, rather than scored data as presented here.

Interpreting the report

These benchmark reports are calculated by converting responses to particular questions into scores. For each question in the survey, the individual responses were scored on a scale of 0 to 100. A score of 100 represents the best possible response². Therefore, the higher the score for each question, the better the trust is performing.

A 'scored' questionnaire showing the scores assigned to each question is available on our website (see 'Further information' section). Please note: the scores are not percentages, so a score of 80 does not mean that 80% of people who have used services in the trust have had a particular experience (for example, they ticked 'Yes' to a particular question) rather, it means that the trust has scored 80 out of a maximum of 100.

Please also note that it is not appropriate to score all questions within the questionnaire for benchmarking purposes. This is because not all of the questions assess the trusts in any way, or they may be 'filter questions' designed to filter out respondents to whom following questions do not apply. An example of a filter question would be Q24 "Were you in any pain while you were in the emergency department?"

The graphs included in this report display the scores for this trust, compared with the benchmark results for all London trusts. Each bar represents the range of results for each question across London trusts that took part in the survey. In the graphs, the bar is divided into three sections:

- the red section (to the left) shows the scores for the 20% of London trusts with the lowest scores
- the green section (to the right) shows the scores for the 20% of London trusts with the highest scores
- the orange section (middle section) represents the range of scores for the remaining 60% of London trusts.

A white diamond represents the score for this trust. If the diamond is in the green section of the bar for example, it means that the trust is among the top 20% of London trusts for that question.

The line on either side of the diamond shows the amount of uncertainty surrounding the trust's score, as a result of random fluctuation.

Since the score is based on a sample of people who attended the emergency department in a trust rather than all people who attended, the score may not be exactly the same as if everyone had been surveyed and had responded. Therefore a confidence interval³ is calculated as a measure of how accurate the score is. We can be 95% certain that if everyone in the trust had been surveyed, the 'true' score would fall within this interval.

²Trusts have differing profiles of patients. For example, one trust may have more male patients than another trust. This can potentially affect the results because people tend to answer questions in different ways, depending on certain characteristics. Therefore, the results have been weighted by the age and sex of respondents to ensure that no trust will appear better or worse than another because of its respondent profile. This approach is called standardisation, and ensures that each trust's age-sex profile reflects the London age-sex distribution (based on all respondents to the survey who attended a London trust). It therefore enables results from trusts with different profiles of patients to be more accurately compared.

³A confidence interval is an upper and lower limit within which you have a stated level of confidence that the true mean (average) lies somewhere in that range. These are commonly quoted as 95% confidence intervals, which are constructed so that you can be 95% certain that the true mean lies between these limits. The width of the confidence interval gives some indication of how cautious we should be; a very wide interval may indicate that more data should be collected before any conclusions are made.

The white diamond (score) is not shown for questions answered by fewer than 30 people because the uncertainty around the result would be too great. When identifying trusts with the highest and lowest scores and thresholds, trusts with fewer than 30 respondents have not been included.

At the end of the report you will find the data used for the charts and background information about the patients that responded.

Further information

Full details of the methodology of the survey can be found at:

Emergency department survey 2008: London trusts

The Whittington Hospital NHS Trust

Arrival at the Emergency Department

Was it possible to find a convenient place to park in the hospital car park?

Did the ambulance crew explain your care and treatment in a way you could understand?

Overall, how would you rate the care you received from the ambulance service?

Were you given enough privacy when discussing your condition with the receptionist?

Waiting

How long did you wait before you first spoke to a nurse or doctor?

How long did you wait before being examined by a doctor or nurse?

Were you told how long you would have to wait to be examined?

Overall, how long did your visit to the Emergency Department last?

- Best performing 20% of London trusts
- Intermediate 60% of London trusts
- Worst performing 20% of London trusts
- This trust (vertical lines show amount of uncertainty as a result of random fluctuation)

This trust's results are not shown if there were fewer than 30 respondents.

Emergency department survey 2008: London trusts

The Whittington Hospital NHS Trust

Doctors and Nurses

Did you have enough time to discuss your health or medical problem with the doctor or nurse?

Did a doctor or nurse explain your condition and treatment in a way you could understand?

Did the doctors and nurses listen to what you had to say?

If you had any anxieties or fears about your condition or treatment, did a doctor or nurse discuss them with you?

Did you have confidence and trust in the doctors and nurses examining and treating you?

Did doctors or nurses talk in front of you as if you weren't there?

Your care and treatment

How much information about your condition or treatment was given to you?

Were you given enough privacy when being examined or treated?

If you needed attention, were you able to get a member of staff to help you?

Sometimes in a hospital, a member of staff will say one thing and another will say something quite different. Did this happen to you?

Were you involved as much as you wanted to be in decisions about your care and treatment?

Tests

Did a member of staff explain the results of the tests in a way you could understand?

- Best performing 20% of London trusts
- Intermediate 60% of London trusts
- Worst performing 20% of London trusts

◇ This trust (vertical lines show amount of uncertainty as a result of random fluctuation)

This trust's results are not shown if there were fewer than 30 respondents.

Emergency department survey 2008: London trusts

The Whittington Hospital NHS Trust

Pain

How many minutes after you requested pain relief medication did it take before you got it?

Do you think the hospital staff did everything they could to help control your pain?

Hospital environment and facilities

In your opinion, how clean was the Emergency Department?

How clean were the toilets in the Emergency Department?

While you were in the Emergency Department, did you feel bothered or threatened by other patients?

Leaving the Emergency Department

Did a member of staff explain the purpose of the medications you were to take at home in a way you could understand?

Did a member of staff tell you about medication side effects to watch for?

Did a member of staff tell you when you could resume your usual activities?

Did a member of staff tell you about any danger signals regarding your illness or treatment to watch for?

Did hospital staff tell you who to contact if you were worried about your condition or treatment?

■ Best performing 20% of London trusts	◇ This trust (vertical lines show amount of uncertainty as a result of random fluctuation)
■ Intermediate 60% of London trusts	
■ Worst performing 20% of London trusts	
This trust's results are not shown if there were fewer than 30 respondents.	

Emergency department survey 2008: London trusts

The Whittington Hospital NHS Trust

Overall

Was the main reason you went to the Emergency Department dealt with to your satisfaction?

Overall, did you feel you were treated with respect and dignity while you were in the Emergency Department?

Overall, how would you rate the care you received in the Emergency Department?

- Best performing 20% of London trusts
- Intermediate 60% of London trusts
- Worst performing 20% of London trusts
- This trust (vertical lines show amount of uncertainty as a result of random fluctuation)

This trust's results are not shown if there were fewer than 30 respondents.
