

# Analgesia – Management of Children over 1 year old

| Subject:                     | Analgesia for Children                                  |
|------------------------------|---|
| Policy Number                | N/A   |
| Ratified By:                 | Drug and Therapeutics Committee                         |
| Date Ratified:               | 13 November 2014  |
| Version:                     | 4.0   |
| Policy Executive Owner:      | WCF Divisional Director                                 |
| Designation of Author:       | Lead Nurse Pain Management                              |
| Name of Assurance Committee: | Drug and Therapeutics Committee                         |
| Date Issued:                 | November 2014   |
| Review Date:                 | 3 years hence   |
| Target Audience:             | All clinical staff                                      |
| Key Words:                   | Pain, analgesia, children, pain assessment, paediatrics |

### **Version Control Sheet**

| Version | Date     | Author                | Status | Comment  |
|---------|----------|-----------------------|--------|--|
| 1       | 17/07/06 | Paediatrics/pain team |        | Approved by the Clinical Guidleines committee  |
| 2       | 16/02/09 | Paediatrics/pain team |        | Added anti-emetic guidelines   |
| 3       | 01/09/10 | Paediatrics/pain team |        | Updated references for cBNF  |
| 4       | 30/7/14  | Paediatrics/pain team |        | Updated information regarding prescribing codeine for children as per MHRA alert. Guidance on prescribing low dose oramorph (incl on discharge). Inclusion of individualised pain management plan. Approbed on the 13/11/14 at the Drug and Therapeutics Committee |

#### Criteria for use

This guideline is to be used in conjunction with a pain assessment tool, acute pain assessment chart and analgesia administration chart illustrated in the appendix (I&II). It is intended for use for all paediatric patients with uncontrolled pain.

#### Staff consulted regarding guideline:

Senior nurses (including link nurse) and practice development nurse Ifor ward Clinical Nurse Specialists for pain

Consultant Anaesthetists - Dr Samina Ishaq and Dr Jane Silk

Paediatric consultant - Dr Joe Raine

Pharmacist for Women and Children - Maxine Phelops

#### Background/ introduction

- Studies have found that treatment of pain in children has not been adequately managed in the past (ref 1)
- Some studies have highlighted that whereas 78% adults have been prescribed analgesia only 30% of children experiencing similar pain and similar procedures have been prescribed analgesia (ref 2)

#### > Inclusion/ exclusion criteria

- Including all children over the age of 1 year old
- Excluding oncology children, see Pan Thames Shared Care guidelines
   <a href="http://whittnet/document.ashx?id=4588">http://whittnet/document.ashx?id=4588</a>. Also for pain in children in sickle cell crisis, please see additional guidelines under paediatrics on the intranet

**See:** Guidelines found under paediatrics/medical protocols

#### > Clinical management

- The pain assessment tool is based on researched evidence in this area. This tool
  has been validated through literature examining the management of pain in
  children (ref 3).
- The tool uses three different styles of assessment which are most effective when used together:
  - a. It uses a categorical rating scale, using descriptive words such as, '0=no pain', '1=mild', '2=moderate' and '3=severe'. According to research, this is the most accepted tool as it is simple and easy for the patient to use. This can be used for older children.
  - b. The tool also uses different faces to describe the severity of pain. This is based on Wong and Baker's faces scale (ref 4), which is used for paediatric patients from the age of three, depending on cognitive ability.
  - c. The behavioural part of the tool observes behaviour as an indicator of pain, particularly useful for babies and toddlers.
- Use of colours also aids assessment.
- The pain score should be documented as part of the observation chart or the acute pain assessment chart. If a patient's pain is 2 or more then intervention is required (for example analgesia, repositioning, distraction)

#### Analgesia

 Analgesia is given according to the severity of their pain based on the World Health Organisation Analgesic Ladder (ref 5).

- The 'Analgesia Administration Chart' gives a full description of the analgesic drugs, based on the British National Formulary for Children 2013/2014 (ref 6) including:
  - o Drug name
  - Routes
  - Preparation
  - Dose according to age and weight
  - Frequency
  - Side effects
  - Comments/contraindications
- The administration chart is based on recent guidelines based on an Medicines and Healthcare products Regulatory Agency (MHRA) alert (ref 7) and Royal College of Paediatrics and Child Health and Royal College of Anaethetists joint guidance (ref 8) which highlighted safety issues when administering Codeine Phosphate to young children, particularly 12 and under. This is due to the understanding that codeine is variably metabolised to morphine and that some children (fast metabolisers) will be vulnerable to unpredictable and excessive respiratory depression particularly those who have pre-existing alteration in ventilatory drive (e.g. chronically obstructed airways from enlarged tonsils and/or sleep apnoea). Low dose Oramorph may be advisable as an alternative but this may not be an ideal solution and for some children the length of stay in hospital may need extending to allow opioid analgesia to be provided safely.
- The chart also is based on guidance from the MHRA regarding the administration of Intravenous paracetamol in paediatric population (ref 9)
- For children who need an individualised treatment plan, appendix III
  demonstrates an example of a pain management plan, for specific patients who
  have complex pain regimes.

#### Discharge Information

- For Discharge Prescriptions please prescribe 50ml quantity or multiples of 50ml.
   Oral morphine solution (Oramorph®) is treated as a controlled drug and as such is subject to the prescribing requirement of the Misuse of Drugs Act 1971 as described in the BNF and BNF for children under the" prescribing controlled drugs" section (p.8-10). In summary on the JAC discharge prescription, the prescriber needs to add in their own handwriting the total quantity in words and figures (e.g. 50 (Fifty) ml) and sign and date.
- When patients are discharged from the ward the BNFc dosages for paracetamol, ibuprofen and diclofenac must be used. The discharge doses may well be lower than the doses used on the ward.

#### "Hurts as much as I can imagine"

- Unable to distract
- Crying, sobbing, screaming, aggressive
- May complain of pain
- Not moving freely, body looks rigid, abnormally still
- May touch or guard painful area
- Clenched jaw, quivering chin
- May be constantly awake or in restless, exhausted sleep

#### **MODERATE PAIN**

#### "Hurts more"

- Distracted for short periods
- Miserable, withdrawn, moaning/crying, whimpering
- May complain of pain
- Reluctant to move.
- Looks tense on moving and may touch/guard painful area
- Unsettled, irritable or restless
- May grimace or frown

#### **MILD PAIN**

#### "Hurts just a little bit"

- Easily distracted
- Withdrawn, miserable or moaning but content when distracted
- Moves reasonably freely, but may seem tense
- May sleep for short periods, contented sleep
- May be contented or slightly irritable

#### **NO PAIN**

#### "Happy because I don't hurt at all"

- Happy/playing
- No cry, contented, gurgling/chatting, smiling
- Moves freely without signs of discomfort
- Contented sleep/relaxed
- Normal position

#### **SEDATION & NAUSEA SCORES**

#### **Sedation Score:**

Awake = 0
Easily roused = 1
Difficult to rouse = 2
Unable to rouse = 3

#### Nausea Score:

No nausea = 0
Mild nausea = 1
Severe nausea = 2
Vomiting = 3

- Pain, sedation & nausea scores must be performed and recorded at least every FOUR HOURS
- ◆ If any score is 2 or above an intervention(s) is (are) required, then reassess after ONE HOUR
- Details of any intervention(s) / persons contacted must be entered in the patient's notes
- If prescribed analgesia is ineffective contact medical team
- For further information you may refer to the Acute Pain Control Handbook (Located on the Intranet)

#### Appendix III

# Whittington Health **MHS**

#### **PAIN MANAGEMENT PLAN**

Name: Tom Gross (EXAMPLE) Hospital Nr: W11223344

Age: 11 years Weight: 30 kg

Date: 31/04/2000

#### **Pain Team**

Magdala Avenue N19 5NF London

Tel: 0207 2885277 Bleep: 2688 Mon-Fri 8:00- 18:00

#### **ANALGESIC PLAN 31/04/2000**

#### **Regular Analgesics**

- Paracetamol 500mg QDS orally (20 mg/ kg < 12 years)</li>
  - Max daily dose 2g (80 mg/kg)
- Ibuprofen 300 mg TDS orally (10 mg/kg)
  - Max daily dose 900 mg (30 mg/kg)
- Oramorph 6 mg QDS orally (200 microgrammes/kg)
  - Max daily dose 24 mg (800 microgrammes/kg)

#### **As Required Analgesics**

Oramorph 12mg possible every 2 hours (400 microgrammes/kg)

It is safe to give the low dose Oramorph AS WELL AS the PRN Oramorph doses as long as the patient does not show extreme side effects. Slight itchiness or nausea can be treated

Please bleep the Pain Team on bleep 2688, if there are any questions or concerns.

Thank you.

Out of hours contact Anaesthetist on call Bleep 3301
